Current Version: 8.0

Developer: [Creative Dezign Concepts Inc](#)

Country: United States

Category: Other (Manufacturing)

Product Summary: Feature based reverse engineering for Autodesk Inventor.

Product Language(s): English

Works With: Autodesk Inventor 2008

Price: *Contact Developer*

Target Customers

Product Designers, After market.

Product Description

DezignWorks is a feature based reverse engineering product integrated inside Autodesk Inventor. DezignWorks automatically creates 2D and 3D features, incorporating its own intelligent extrude command. Complex 3D shapes are DezignWorks forte, simply move the digitizer device across the complex shape and the continuous movement of the device is stored allowing for interactive editing of the data or for automatically capture more data with our patent pending Database Manager. DezignWorks insure that all geometry elements are fully parametric and conforming to the feature-based intelligence of Inventor. DezignWorks is compatible with the most common 3D articulating devices, such as Faro, Microscribe and Romer. Get on the fast track to reverse engineering with DezignWorks.

Benefits

Seamless integration to Autodesk Inventor with virtually no learning curve. Reverse engineering parts is simple and accurate.

Features

True Feature Based reverse engineering directly inside Autodesk Inventor. Ability to capture complex 3D shapes and allow interactive editing inside Inventor.

Registration and Authorization

Standard windows registration .net

Support and Training

DezignWorks is supported both directly and by a Var Channel.

What is Included

Box: 1 CD, getting started manual and tutorial.

Download: User have access to an ftp site for instant updates.

Where to Buy

This product is available directly from the developer -- call **704-660-5100**.
